

# Torotoro gives expert cyber security support to Waikato SMEs

Cyber security is a big umbrella encompassing many disciplines. Nobody can be a unicorn who knows everything and can solve all cyber related tasks alone. Generalists are not experts.

This is where we can help you. There are areas where we can serve you and there are areas where we need to involve other experts.

The main goal is to serve you well, solve your problem and help you progress your business forward.

Our philosophy is to help you to achieve better business results by solving your cyber issues.

Today, we aim help achieve better business outcomes.

The goal of cyber security services is to serve business customers and markets through individualised analysis, staff training and ongoing support.

# Torotoro Cyber Security Services

In this connected world of today it does not really matter if you are small or big, the cybersecurity issues can be the same.

## Standard and Tailor made Services

---

You can choose from our basic services of the following list or ask for a bespoke service tailor made for your needs.

### Cyber security programs

Customers always profit from learning about their organization's cybersecurity and resiliency status. We don't just analyse your IT operations and infrastructure but your company as a whole data driven organization. Based on our findings we can then help build your own cyber security program.

### Compliance

Depending on your mandatory or voluntary compliance needs, we can help you step into the world of ISO 27001 and 27701, NZPA, GDPR and so on.

### Security awareness trainings

Company trainings can be mandatory and boring. We can even help with the mandatory ones, making them entertaining and motivating. The goal is to change the action of your employees. It does not happen overnight but it will happen quickly.

### Virtual CISO

vCISO can provide the same level of cyber security services as a fully employed CISO on a very different cost structure and level. A vCISO can be paid on either Time & Material basis or on a fixed fee monthly cost.

### Data protection

Data protection services with NZPA and GDPR focus. Do you have business with NZ or EU citizens? Then, you must think about the personal and company data protection issues and challenges.

### Cyber Security assessments

Customers who want to understand the real protection of their cyber security systems can benefit from a cyber security or information security assessment. It gives high level view and advice for improvements.

## Benefits of working with us

---

Torotoro is about to change the culture around cyber security in your company.

As always, the human factor is pivotal in protecting your data and your customer's data.

Torotoro advisors have real life experience from the customer side, enabling us to step into the shoes of the customer.
